

## How to Create a Safer Home

A room-by-room guide to help eliminate the most common causes of falls

## **Falls Prevention Guidebook**

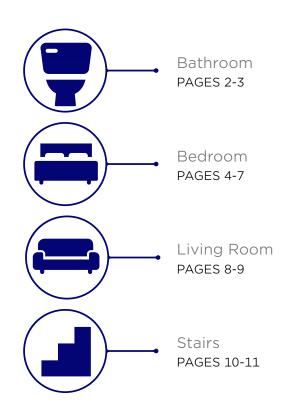

We can't prevent every fall, but we can help reduce the likelihood of trips and slips that lead to them.

This guide provides before-and-after images to help you identify and remove fall hazards in the home, and includes advice on what to do if you happen to fall.

Falling is a serious health risk on its own and can be related to other major health issues.

The time to prepare is now, before a fall happens. In addition to making every effort to remove the fall risks in your environment, make a plan for after you fall.

- Think about how you would get up from a prone position to sitting or standing.
- If you can't get to your feet, call for someone you live with, use a medical alert system or dial 9-1-1 if your cell phone is within reach.
- If you're with someone who has fallen and don't think you can help them up in a way that's safe for both of you, call 9-1-1.

- Tight spaces and wet floors make the bathroom one of the most likely places for falls.
- 2 Lack of a nightlight makes it hard to see at night or in low light.
- Unsecured bath mats can slide out from underfoot and wet floors can lead to slips.
- 4 Slippery surfaces can cause you to lose your balance or fall while getting in or out of the show or

- Grab bars help increase safety.
- Installing an automatic motion- and light- sensitive nightlight improves visibility and increases security.
- Removing or securing a bath mat, or replacing it with a non-slip option, makes it safer to get in and out of the tub or shower.
- 4 Using a sturdy shower seat helps reduce the risk of losing your balance and installing a hand-held unit eliminates the need to reach overhead.

- The chair is too close to the door and could make exiting the room difficult.
- 2 Shoes, small rugs and other items on the floor are easy to trip on in the dark or when first waking up in the morning.
- Clutter on your nightstand can easily be knocked off, creating a potential tripping hazard.
- 4 Without space for a phone, you may trip or lose your balance in the rush to answer a call.

- 1 Relocating the chair clears the path to the door.
- Moving shoes and slippers out of the walking areas and removing small rugs or securing them to the floor with double-stick tape helps reduce falls risk.
- Decluttering the nightstand creates room for necessities that must be accessible from bed, and adding a lamp improves nighttime visibility.
- 4 Placing a phone or medical alert service device on the nightstand offers easy access to help

## Bedroom: needs improvement

- 1 Low visibility at night increases the likelihood of slips, trips and falls.
- The walker isn't easily accessible from the bed.

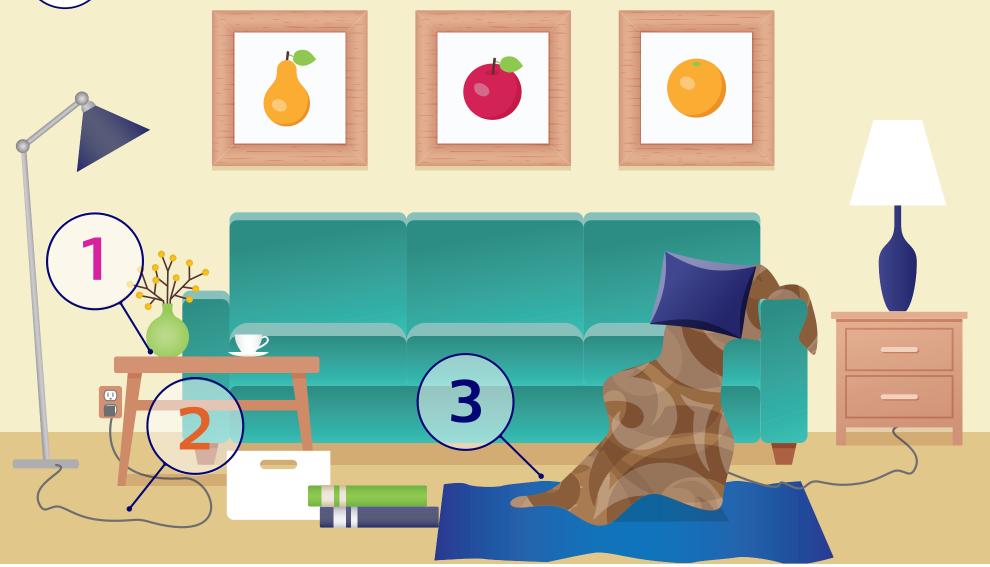

- Electrical cords and charging cables are easy to trip over.
- **4** Bed linens and other items on the floor may create a tripping hazard or cause a fall.

- Installing an automatic motionand light-sensitive nightlight makes it easy to find your way.
- Moving the walker makes it accessible from the bed and clears the path to the door.
- Making sure cords are safely run behind furniture removes trip hazards.
- Keeping items off the floor helps reduce the risk of trips and falls.

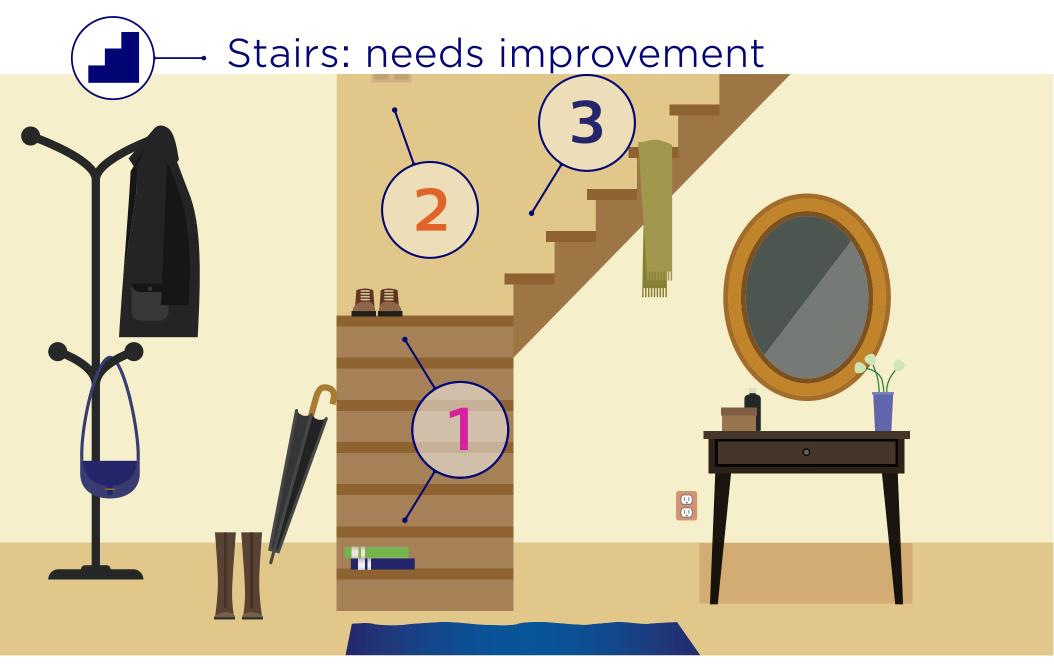

## Living room: needs improvement

- 1 Items on the floor increase the likelihood of tripping.
- Cables, cords and wiring in open spaces are easy to trip over.
- **3** A loose throw rug or blanket on the floor is easy to trip over.

- 1 Moving objects off the floor clears your path.
- 2 Running cords behind or under furniture makes walking safer.
- Removing or securing rugs makes moving around the room safer.

- 1 Loose items on stairs and landings are easy to trip over or slip on.
- 2 Shadows and dim conditions increase the likelihood of missing steps or slipping.
- Without a handrail, even a small misstep can turn into a major fall.

- 1 Keeping items off the stairs allows you to focus on the steps and reduces loss of balance from trying to avoid items.
- Adding ceiling lights with switches at the top and bottom of the stairwell, or automatic light- and motion-sensors stairway lighting ensures you can see where you're
- Installing a secured handrail at the proper height provides support and improves balance.
